Appln. No.: 10/730,210 BBM-141US2

Amendment Dated June 11, 2007 Reply to Office Action of March 9, 2007

ABSTRACT

A bone plate assembly utilizing at least one bone screw for fixation of adjacent bones of a spine including a base plate having at least one aperture extending therethrough and screw retaining mechanism mounted and movable on the plate between locked and unlocked positions relative to the aperture for preventing the bone screw from backing out from the base plate.
